

Additional adjustment markings for the SK4 and SK6 print heads

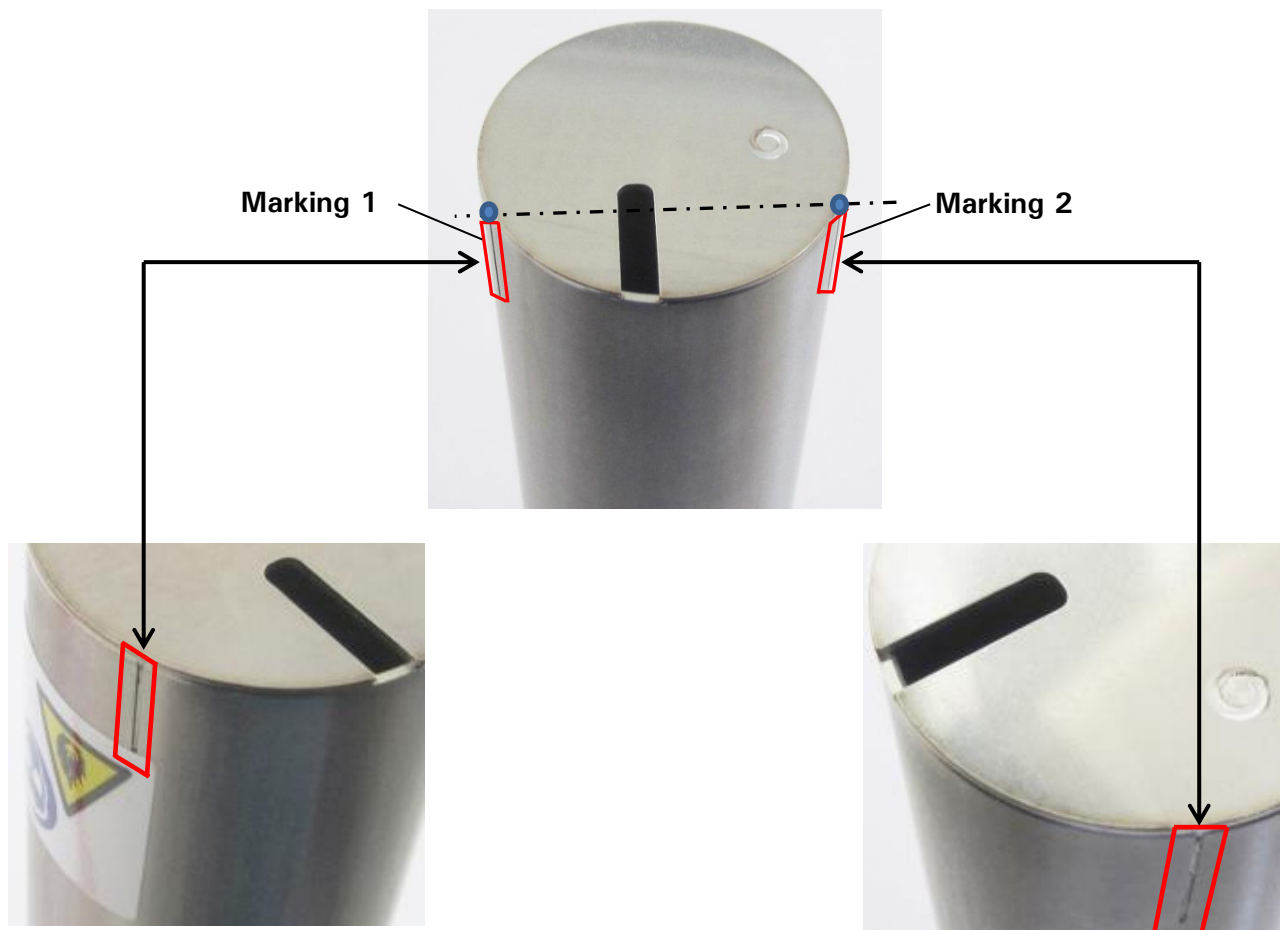

Information

- From August 2017 (SK6), respectively by the end of 2017 (SK4) the print head covers for the JET3up and JET2neo printers are equipped with **two additional markings** at the ink-outlet.
- The great advantage of these markings are, that the print head- adjustment to the printed product will be essentially simplified.
- The new head covers are downward compatible to the previous covers and identical in regarding of the installation. Also the article numbers will remain the same.

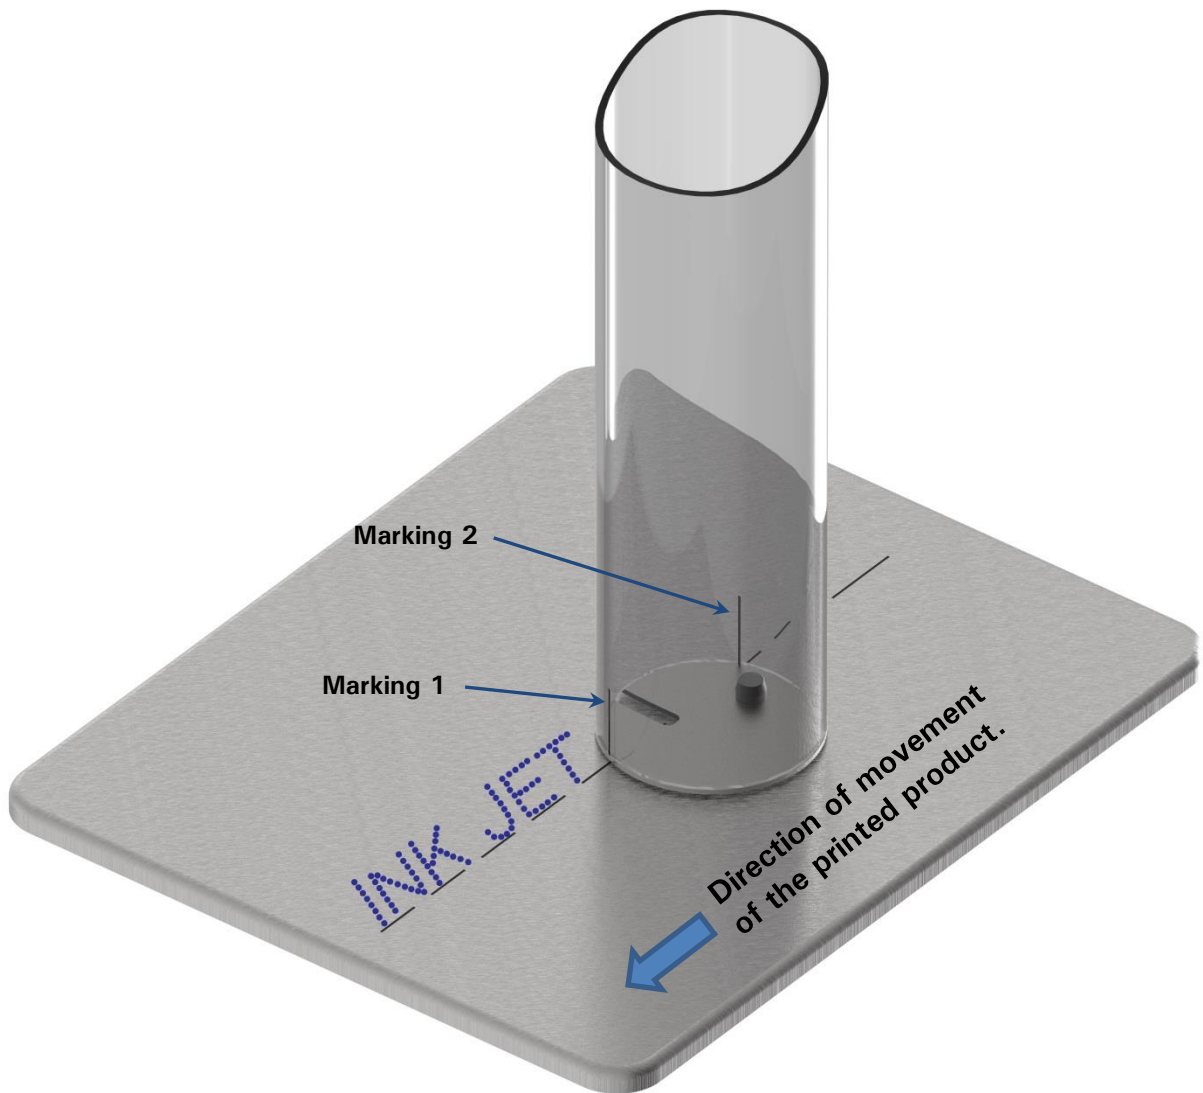

Position of the new markings:

(Serve as a guidance for the print head adjustment)

Parallel adjustment of the print head to the baseline of the printout

As shown, the print head will be adjusted via the both markings parallel to the baseline of the printout
